

ARRIVAL OF NEW VIKING RED SIRES

S VALPAS and VR FLAME

S VALPAS \$28

KANTOLAN OKKE x KANGASSALON KELLI X HARALAN ETRO

S Valpas has arrived in Australia and offers new bloodlines for our red breeders through K Okke and K Kelli on the dam side, he is a high production sire with a lot of milk and is positive for components. Valpas has a converted APR of 197 and a very impressive ASI of 190.

He has good daughter fertility and is positive for other diseases, longevity and hoof health with 97% Rel on 300 daughters. Valpas daughters have good udders and teat length is very close to average and a little thicker. Valpas offers more width and depth to body and is ideal for those breeders who are looking for this without using any Holstein genetics as he carries 100% red bloodlines. (Daughter picture below)

NEW GENOMIC RED VR FLAME \$26

V FOSKE X GUNNARSTORP X O BROLIN

We have secured limited doses (200) of high genomic rated sire VR Flame +24 NTM. Flame is currently a high demand sire in the Viking population and hopefully we can import doses later this year.

He has a similar profile to his father V Foske but has higher scores for feet and legs and even higher hoof health! He is the highest rated V Foske son in the world and has inherited his sire's great health profile and can be used on maiden heifers with confidence.
